

VIGHNAHARTA RUN — THE 108 VIGNAS

Sacred Expeditions Multi-Game Divine Arcade • Complete Walkthrough Script

LIVE PRODUCTION URL: <https://vighnaharta-run.vercel.app/>

PRESENTER: Sidharth Rathod

CORE TECH: Next.js 14 App Router, Three.js WebGL, Canvas 2D Physics

DEPLOYMENT: GitHub to Vercel
Automated CI/CD

PRE-RECORDING QUICK CHECKLIST

- Open <https://vighnaharta-run.vercel.app/> in Chrome/Edge at **100% zoom**.
- Screen recorder (OBS / Loom / Win+G) set to **1080p 60 FPS**.
- Test mic clearly; maintain an energetic, enthusiastic, and confident tone.
- Optional background music: devotional sitar/flute at **10% volume**.

SCENE 1: INTRODUCTION & PROJECT VISION [0:00 – 0:45]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Start on the homepage top fold (<https://vighnaharta-run.vercel.app/>). Hover over the glowing navbar ('VIGHNAHARTA — The 108 Vignas' logo on left, end-to-end middle links, Profile button on right). Let viewers see the cascading Lord Ganesha background aura with rotating sun halos and floating Diyas.

■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Hello everyone, and welcome! Today, I am proud to present **Vighnaharta Run — The 108 Vignas**.

In Indian philosophy and Hindu culture, Lord Ganesha is revered as Vighnaharta — the divine remover of obstacles. We asked a fundamental design question: Why should players simply run away or dodge obstacles when they can wield divine power to smash right through them?

Our core motto is: **'Don't avoid the obstacles. Remove them.'**

Vighnaharta Run is a full-featured multi-game divine gaming arcade built with **Next.js 14, Three.js WebGL, and responsive 2D physics**. It combines four distinct interactive experiences: a procedural 3D Temple corridor runner with sharp 90-degree corner turns, an authentic 3D Ganesh Idol customization artisan studio, a physics-based 2D Hill Climb mountain stunt racer, and a photorealistic 3D high-speed endless runner — all unified with real-time stats, global leaderboards, and live analytics."

■ Presenter Tip: Speak with warmth, festival energy, and clear diction. Let the glowing background animations shine.

SCENE 2: DEVOTEE ONBOARDING & PERSONALIZATION [0:45 – 1:30]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Click the PROFILE button in the navbar (or show the Devotee Initiation modal). Click 'EDIT PROFILE'. Enter runner alias 'Sidharth', choose festival city 'Hyderabad', pick a sacred avatar icon, and save. Highlight that progression starts cleanly from 0 (Best Score: 0, Total Distance: 0m, Games Run: 0).

■■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

*"Let's begin our journey by looking at the **Devotee Profile and Personalization system**.*

When a new devotee opens our website for the first time, our onboarding system greets them with the Devotee Initiation modal. Players can enter their personal Runner Alias, select their festival city — such as Mumbai, Pune, Hyderabad, or Varanasi — and choose their starting sacred avatar style.

Notice how starting progression, high score, and distance are cleanly initialized to zero, providing every player an authentic, fresh expedition. All player achievements, unlocked festival badges, and stats are stored cleanly on the client side with instant state hydration and zero reload lag."

■ *Presenter Tip: Point your cursor to the stats cards showing 0 so viewers see the clean new-user experience.*

SCENE 3: GAME 1 — VIGHNAHARTA TEMPLE RUN (3D PROCEDURAL RUNNER) [1:30 – 2:30]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Navigate to the homepage. Highlight Card 1 (Vighnaharta Temple Run) with its glowing golden border and 'NEW 3D GAME' badge. Click 'PLAY TEMPLE RUN'. Play for 20 seconds: run down temple corridors, execute sharp 90-degree corner turns (left/right arrows or swipe), slide under brass bells, jump stone barriers, and smash obstacles.

■■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Now, let us enter our first major game mode: **Vighnaharta Temple Run**.

Notice the visual presentation of the game card on our home screen, highlighted with our signature golden halo border and glowing drop shadow.

*When we launch Temple Run, the player steps into an infinite 3D procedural temple complex built with pure Three.js. What sets this game apart is its authentic procedural turn engine: corridors generate dynamically, and players must execute **sharp 90-degree corner turns** left and right to navigate sacred banyan courtyards and crystal caves.*

Players jump over obstacles, slide beneath ringing brass bells, and gather divine Modaks. Alongside faithful Mushika, Ganesha activates sacred shockwaves to smash through destructible Vighnas, counting down against the sacred 108 Vighnas goal!"

■ *Presenter Tip: Execute at least one 90-degree turn and one bell-slide during gameplay to demonstrate fluid responsive controls.*

SCENE 4: GAME 2 — GANESH IDOL SHOP (3D CUSTOMIZATION STUDIO) [2:30 – 3:30]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Navigate to Card 2: 'Ganesh Idol Shop' (or click IDOL SHOP in navbar). Enter the artisan studio. Click through customization categories: Mukut (Crown), Jewels, Aura/Halo, Shawl (Angavastram), and Pedestal. Drag mouse to rotate the 3D Ganesha idol 360° and zoom in. Click 'Use as Avatar' to update the avatar in real time.

■■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Our second flagship experience is the **Ganesh Idol Shop & Artisan Studio**.

Ganesh Chaturthi is celebrated across India for the traditional craft of sculptors handcrafting Murtis. We brought that sacred artisan tradition directly to the web!

*Here, devotees can handcraft their very own 3D Lord Ganesha idol across **12 authentic visual categories**: including traditional festival Mukuts, divine Tripundra tilaks, sacred Kundal earrings, radiant sun mandala auras, and lotus pedestals.*

Players have full 3D orbital controls to rotate and zoom into every intricate detail. With a single click of 'Use as Avatar', the customized Ganesha is saved and rendered live across the navbar, devotee profile, and leaderboard!"

■ *Presenter Tip: Slowly rotate the 3D model with your mouse to showcase real-time lighting, materials, and shadows.*

SCENE 5: GAME 3 — GANESHA HILL CLIMB RACING (2D PHYSICS RACER) [3:30 – 4:30]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Navigate to Card 3: 'Ganesha Hill Climb Racing' (with golden halo and 'NEW!' badge). Launch Hill Climb. Show the Vehicle Garage (Mushika Rath, Airavata Rover) and Stage selection (Kailash Foothills, Western Ghats). Drive up steep slopes, balance suspension during flight, execute an aerial backflip, and collect Amrit fuel canisters.

■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Next, we have our exhilarating physics arcade mode: **Ganesha Hill Climb Racing**.

Inspired by classic stunt hill climb gameplay, this mode features custom rigid-body suspension physics running at a locked 60 FPS on HTML5 Canvas.

Devotees pilot divine vehicles like the Mushika Rath and the Airavata Rover across rugged terrain — from the Himalayan foothills of Mount Kailash to the lush, steep cliffs of the Western Ghats.

Players must carefully balance throttle and brake to conquer undulating hills, execute mid-air backflips for bonus modak coins, and harvest Amrit fuel canisters before their chariot runs dry. Earned coins can be reinvested in the divine workshop to upgrade engine power, suspension dampening, and tire grip!"

■ Presenter Tip: Show a jump over a mountain peak, and let viewers see the coin and fuel pick-up feedback.

SCENE 6: GAME 4 — VIGHNAHARTA 3D RUNNER (HIGH-SPEED CORRIDOR SPRINT) [4:30 – 5:15]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Highlight Card 4: 'Vighnaharta 3D Runner' on the landing page, showing its newly updated golden border, shining glow, and vibrant 'PLAY 3D RUNNER' action button matching all other cards. Click play. Showcase high-speed 3-lane lane switching, riding the Mushika Hoverboard, and smashing obstacles with sacred shockwaves.

■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Our fourth expedition is the original high-speed **Vighnaharta 3D Runner**.

Notice that Card 4 is now fully styled with the identical golden border, shining halo aura, and vibrant action button as our other expeditions, creating a unified premium aesthetic.

In this mode, players sprint down decorated festival streets, ducking under arches and switching lanes at breakneck speed. Power-ups include the high-speed Mushika Hoverboard, magnet modak attractors, and divine shockwave blasts that pulverize obstacles to climb the live combo multiplier."

■ Presenter Tip: Point out how all 4 cards on the landing page now shine consistently with golden elegance.

SCENE 7: LIVE ANALYTICS DASHBOARD & LEADERBOARDS [5:15 – 6:00]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Click DASHBOARD in the top navbar. Show the interactive Recharts graphs (Run Score history, Modak collection trend, Distance covered), multi-game summary KPIs, and session breakdown tabs. Then click LEADERBOARD to show live rankings with cities, avatars, and high scores.

■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"What truly elevates Vighnaharta Run from a simple mini-game into a comprehensive web platform is our **Live Analytics Dashboard and Global Leaderboard**.

Powered by Recharts and responsive SVG data visualization, the Dashboard provides devotees with deep performance telemetry: tracking score trends over time, Vighnas smashed, modaks collected, and distance covered across all four game modes.

The Leaderboard showcases top devotees across India, categorized by festival cities, avatars, and verified obstacle removal achievements."

■ Presenter Tip: Hover your mouse over a chart data point so viewers can see the interactive tooltip.

SCENE 8: ARCHITECTURE & CLOUD DEPLOYMENT PIPELINE [6:00 – 6:45]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Point to the browser URL bar showing 'https://vighnaharta-run.vercel.app/' with the secure SSL lock. Hit the browser reload button (F5) to show the completely instant, smooth reload (zero jitter, zero scroll-lag, zero hydration flash). Mention the GitHub repository and Vercel automated CI/CD pipeline.

■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

"Now let us talk about the **Architecture and Deployment Pipeline**.

Vighnaharta Run is built using the modern **Next.js 14 App Router** with TypeScript. It uses pure Vanilla CSS and tailored design tokens to achieve 60 FPS performance without heavyweight runtime CSS overhead.

Our continuous deployment is automated through **GitHub and Vercel**: Every code change pushed to our GitHub repository triggers an automatic Vercel CI/CD pipeline, prerendering all static pages, bundling WebGL assets, and deploying globally to edge nodes in under two minutes.

Furthermore, we recently eliminated all reload glitches by pre-compiling animation keyframes, optimizing scroll restoration, and leveraging Next.js self-hosted Google Fonts. As you can see when I refresh the page right now — the reload is instantaneous, completely smooth, and butter-soft!"

■ Presenter Tip: Refresh the browser live while speaking this line to visually prove that the reload is completely smooth.

SCENE 9: CONCLUSION & FINAL CALL TO ACTION [6:45 – 7:15]

■ SCREEN RECORDING CUE (WHAT TO SHOW & CLICK)

Scroll smoothly back to the top of the homepage or show the 4 shining expedition cards. Keep the mouse steady, letting the ambient light stream, glowing golden borders, and floating sacred modaks frame your closing statement.

■■ EXACT SPOKEN SCRIPT (VOICEOVER DIALOGUE)

*"In conclusion, **Vighnaharta Run** bridges timeless Indian cultural heritage with state-of-the-art web engineering — delivering 3D runners, physics simulations, 3D craft studios, and real-time analytics in a single, unified web application that runs directly in any browser with zero installation.*

*You can experience the game right now live at **vighnaharta-run.vercel.app**.*

*Thank you very much for watching. **Ganpati Bappa Morya!**"*

■ Presenter Tip: Hold the final visual frame for 3 seconds before hitting stop on your screen recorder.

VIDEO PRESENTATION QUICK REFERENCE CHEAT SHEET

Timestamp	Section	On-Screen Action (What to Click & Show)	Key Talking Point
0:00 – 0:45	Intro & Vision	Homepage top fold, navbar end-to-end, cascading background aura	'Don't avoid obstacles. Remove them.' Multi-game ecosystem.
0:45 – 1:30	Devotee Profile	Click Profile, show Devotee initiation, alias, city, 0 stats reset	Client-side persistence, fresh progression, zero reload lag.
1:30 – 2:30	Temple Run	Card 1 (Golden border). Play game, execute 90° corner turns & bell slides	Procedural Three.js corridor generation, 108 Vighna destruction.
2:30 – 3:30	Idol Shop	Card 2. Customize 12 parts, rotate 3D idol 360°, set as profile avatar	Artisan craft heritage, 3D WebGL camera, live avatar sync.
3:30 – 4:30	Hill Climb	Card 3. Select vehicle, tackle steep slopes, aerial backflip, Amrit fuel	2D rigid-body suspension physics, upgradeable divine workshop.
4:30 – 5:15	3D Runner	Card 4 (Golden border & shine). High-speed lane dodge, shockwaves	Consistent 4-box golden aesthetic, Mushika hoverboard powerup.
5:15 – 6:00	Dashboard & Rank	Navigate to Dashboard (Recharts graphs) and Leaderboard page	Real-time analytics, performance telemetry, multi-game tracking.
6:00 – 6:45	Deployment	Show live Vercel URL, hit reload live to demonstrate smooth reload	Next.js 14, automated GitHub to Vercel CI/CD edge deployment.
6:45 – 7:15	Conclusion	Back to Home screen, 4 expedition cards with shining aura	Zero install web app, live link call-to-action, <i>Ganpati Bappa Morya!</i>

POST-PRODUCTION & UPLOAD TIPS FOR YOUTUBE / LOOM / SUBMISSION

- **Video Description:** Include the live production URL <https://vighnaharta-run.vercel.app/> and GitHub repository.
- **Clickable Chapters:** Paste timestamps (0:00 Intro, 1:30 Temple Run, etc.) directly into YouTube/Loom description.
- **Audio Normalization:** Ensure voice levels sit between -12dB and -6dB so commentary is loud and crystal-clear.
- **Thumbnail Idea:** Capture a high-res screenshot of the 4 glowing golden expedition cards with Lord Ganesha in the background.
